Source: ICES/Reports/Selected Commodities

Notes:

The term "Marihuana" was used for most Cannabis related drug seizures until late 2018. You will therefore not see any "Marihuana" seizures in 2019 and 2020. Likewise, Cannabis related seizures and its subcategories were not used until 2017 and not fully used until late 2018 when "Marihuana" ceased to be a category.

Dosages generally (but not always) refer to Cannabis products that are produced in a measured unit often seen in cartidges used for smoking/vaping.

These stats represent: All drug seizures are for British Columbia, All modes (Traveller and Commercial), All Ports of entry (Land Borders/Airports/Postal, ETC), All import and export seizures. The system used to track seizures do not differentiate between import and export seizures and are therfore all included together.

The stats also represent seizure counts. What this means is if one traveller has 4 types of drugs seized, it counts as 4 seizure counts.
